The 70's

To many that experienced the generation, the clear opinion is that the 70's is the golden age for arcade gaming. Many iconic games first appeared in this decade, including Pong, Space invaders and Asteroids. From just these games, life-long gaming fans were born. The 80's was when the home consoles really began to develop, and this is when you may begin to find some names familiar. For example, the Nintendo Entertainment System. This decade also introduced many recognisable characters, of which some are still popular to this day, for example, Mario. The 80's was the first decade to truly develop gamers and as a result is often seen as the most nostalgic. This is shown through re-releases of consoles selling out. According to Wikipedia, the NES classic mini, which released in 2018, sold more units than the Xbox and the PlayStation. This is evident of the effect that the 80's had on gaming.

The 90's

The 90's gave rise to a new development in gaming, 3D graphics. This dramatically revolutionised the entire console market as a new era had begun. The jump in graphics meant hardware also had to improve. This led to the introduction of Sony's PlayStation. Its popularity stemmed from the console's powerful capabilities as it offered the smoothest 3D experience available at the time. Through this time, gaming grew as a social activity. As a result, gaming as an activity inevitably grew in popularity.
